

## Penticton Boom Lift Training

Penticton Boom Lift Training - Elevated work platforms, also known as aerial platforms, enable workers to perform jobs at heights that will otherwise be unreachable. There are different types of lifts intended for different site conditions and applications. If not carefully operated, elevated work platforms can result in serious injury or death. The most common reasons for related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators must be trained fully in techniques to prevent accidents during the operation of lifts.

Aerial Lift Safety course is intended for individuals who should operate the devices more effectively and safely. The course provides thorough instruction about the most used lifting devices in the industry.. Kinds of lift covered comprise scissor, articulating and boom supported aerial lifts. The video presents the correct methods operators must follow. Instruction focuses on pre-operational check, protection against falls, safe driving procedure and stability of the device.

The program addresses equipment reliability and employee safety. All instructional materials are compliant with government, provincial and state agency regulations and requirements. Training techniques and course management would be taught. The trainer will likewise know the technical aspects of aerial lift safety.

Components of the Boom Lift Training program comprise both classroom training and practical training. Both sessions must be completed successfully for the participant to receive a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms can be positioned totally beyond the base of the machinery. The theoretical part of the training is practically identical for both kinds. The practical part of the training could be finished sooner if only one type of machinery is used.

### Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training will help operators to efficiently use elevating work platforms while lessening the possibilities of an expensive accident in the workplace. Trainees would review of company policies and applicable regulations, talk about Due Diligence, review Criminal Negligence and consequences to employers, trainers, supervisors and workers. Participants will study equipment features, stability, operating procedures, parking and fueling/charging procedures. Site-specific safety concerns would be addressed.
