

## Penticton Aerial Lift Certification

Penticton Aerial Lift Certification - Aerial Lift Certification is for workers who need a thorough knowledge of aerial lift safety. Supervisors, maintenance workers and construction craftsmen require this training to make certain that operators and inspectors are qualified. Federal, provincial and state regulations require companies to be certified to be able to do in-house aerial lift checks.

Most workers who are required to perform tasks at elevated level would often utilize the same means to get to these desired heights, regardless of the type of work which has to be carried out. Aerial lifts and scissor lifts are the mechanized machines utilized to lift equipment and workers to elevated places.

Bucket trucks called Cherry Pickers are aerial platforms which feature a supported boom and bucket. The main hazard to using this particular kind of platform is normally electrocutions, tip-overs and falls. Certification guarantees that workers who use aerial lifts are trained properly to safely operate the equipment. Training likewise ensures that workers know how to maintain aerial work platforms based on the directions of the manufacturer.

Training consists of the following lifts: Vehicle-mounted aerial lifts, Boom-supported aerial lifts and scissors lifts. Trainees would gain an understanding of the causes and results of aerial lift accidents, and will learn safe operating procedures. They would become technically competent in the various types of aerial lifts, in addition to terminology and components. From choosing the best aerial lift for the job to interpreting rated capacity charts, the certification program will provide employees with everything they must know in order to perform their work safely.

People who are assigned the task of checking aerial lift devices have to know how to check gears, booms, operating mechanisms, structural parts, functions and control systems, power plants, braking systems, attachments, shafts and pins, electric and pneumatic parts, hydraulic, emergency safety devices and operator aids, and all that. Training would include the following: the role of the inspector in lessening liability exposure and accidents; how to perform a pre-use, annual and monthly check; how to interpret and apply regulations about aerial lift safety standards; how to write inspection reports; inspection procedures, checklists and techniques; understanding and applying the three levels of aerial lift inspection; following record keeping requirements; and when to remove aerial lifts from service if they are defective.
