Penticton Forklift Training Program

Penticton Forklift Training Program - Forklifts are sometimes called lift trucks, jitneys or hi los. These powered industrial trucks are utilized widely today. Department stores used forklifts in order to unload merchandise from trailers. Warehouses utilize them for tiering merchandise. And grocery stores make use of small models to drop stock in the aisles. Whether transporting lumber at a sawmill or loading material at a construction site, forklift operators are needed to be well trained and licensed. The priority should be on worker and pedestrian safety. This lift truck training course teaches the health and safety rules governing forklifts in order to ensure their efficient and safe utilization.

Forklift Training Program Safety Tips:

Forklift training programs are designed to guarantee that the operator can safely control the forklift during tilting, traveling and lifting. Only skilled operators must operate a forklift.

Safety guidelines while traveling - hands, head, feet, legs and arms must be kept in the forklift truck during traveling. The forks must be low to the ground and tilted back. Observe traffic signs which are posted. Decrease speed and honk the horn if taking a corner. If the vision of the driver is blocked by the load, drive backwards slowly. Pre-check the ground for potential hazards, like for instance objects, oily or wet spots, rough patches, holes, people and vehicles. Prevent sudden stops.

If pedestrians pass across the vehicle or moves into a blind spot, the forklift should be stopped, the load lowered, waiting until the way is clear. If a load is being transported on an incline, the forks must be pointed uphill with a load and downhill without a load. The forklift must just be turned around if on level ground.

Safety guidelines when steering - Never turn the steering wheel sharply if traveling fast. Turn utilizing the rear wheels and support the load by the front wheels. An overloaded truck would be hard to steer. Follow load limits. Do not add a counterweight in order to improve steering.

Safety guidelines when loading - Adhere to the recommended capacity and load limitations of the lift truck. This information is displayed on the data plate. Always make sure that the load is positioned according to the recommended load centre. The forklift would remain stable so long as the load is kept close to the front wheels.

Before inserting the forks into the pallet, the mast of the forklift must be in an upright position. Level the forks before inserting them.
