Penticton Crane Safety Training

Penticton Crane Safety Training - Both crane operator and their supervisors have to be aware of all the possible problems connected to the operation of an overhead crane. All over North America, there is legislation that provides regulation for the safe operation, inspection and maintenance of lifting equipment. Crane Safety courses help owners and managers of cranes accredit their operators in accordance with provincial legislation.

Our operator safety training course would provide the crane driver trainee with the essential knowledge and skills to be able to make lifting with a crane easier and safer. Training the driver really helps to lengthen the life of cranes by guaranteeing crane's safe operation and high performance.

Operators who are accredited are needed to run and operate articulated cranes under 16,000 lbs. capacity. The articulated crane operator has to have knowledge concerning the numerous operational characteristics and features of the machinery. Prior to use, a pre-operational machine check must be carried out. There is a legal requirement to do a pre-operational inspection as well as an inspection of the work-site ground and overhead conditions.

The instructions provided in the manufacturer handbook gives information on inspection, maintenance, and unloading and loading operations. According to legislation, annual and daily checks are mandatory. Drivers must maintain an up-to-date logbook in most regions. They may be required to validate machine warranties.

Adding remote control devices to the cranes is often recommended. Remote control improves safety by allowing the operator an easier option for handling the crane.

Improving crane safety will often help a company's bottom line. Those companies that follow safe machine practices will normally see greater cost savings than companies which don't. The possibility of equipment damage and personal injury is really reduced when a driver who is well-trained is handling the crane. Safety conscious operators are more productive resulting in less times required for loading and unloading.
